09 · Claim Evidence Map

Claim	Evidence	Class	Confidence
Gold trades near \$4,155	WEALTH API ticker	OBSERVATION	high
RSI 28.9 elevated into oversold	WEALTH API computation	COMPUTATION	high
12 PDF skills on this node	os.walk followlinks=True	OBSERVATION	high
9 are symlinks	os.path.realpath()	OBSERVATION	high

10 · Contradictions

- Blueprint v1.1 names 13 skills under /opt/arifOS/ — that path does not exist. Refused, not imported.
- The map is CONTEXT basemap only. Labelling it 'geological map' would be a false upgrade.
- RSI 28.9 is arithmetic fact; 'gold will rise' is a prediction not made here.
- P14 RESOLVED: A-FORGE surface audit says GEOX 0 drift; an external connector was rejected calling 'geox_system_registry_status'. Runtime evidence: that name is INTERNAL (registry.py), not on the 26-tool canonical surface. The connector is stale, the GEOX layer is converged. Canonical entry = geox_surface_status(mode='registry').

11 · Temporal View

Temporal classification: **UNRESOLVED**

CHRON MCP not reachable from compositor; temporal classes stated as a table, no live timeline entry invented.

Class	Meaning	Example from this artifact
CURRENT	Fresh, re-probeable	Gold ticker at probe time
STALE	Previously true, not presumed current	Dossier v1.1 (earlier session)
SUPERSEDED	Newer artifact replaces it	Blueprint's /opt/arifOS paths
PREDICTED	Forward-looking, not evidence	None — no predictions in this artifact
UNRESOLVED	Open question	CONTEXT-only map acceptable as deliverable?

12 · Authority View

HERMES	yes	yes	yes	no	meaning/claims
A - FORGE	yes	yes	no	yes	render/compile
arifOS	yes	yes	yes	yes	authority gate
CHRON	yes	yes	—	no	temporal
GEOX	yes	yes	yes	no	geology
WEALTH	yes	yes	yes	no	market
WELL	yes	yes	yes	no	readiness

Capability ≠ Authority. Each organ may be capable of more than this artifact exercised.

13 · Substrate View

Organ	State	Authority
WELL	degraded	ADVISORY ONLY — never SEAL/HOLD
Disk free	82G	observed
RAM available	18Gi	observed
Load1	3.978515625	observed

WELL is advisory only — it never SEAL/HOLD. arifOS remains the authority organ.

14 · Hash Receipts

Artifact	SHA-256 (first 48)

fig_map_real	fb8b288bcc6e5421858a2d73e1a01c96403243c8a517a8fd...
fig_image_evidence	c16ac99a71f7fdbb4ff0eda684314b105eef44f2c492b039...

15 · Honest Gaps

- No real geological dataset used — cross-section is SYNTHETIC and labelled so.
- Map is CONTEXT basemap only; no structural/stratigraphic/well layers on disk.
- No seismic or well-log panels — no SEG-Y/LAS/tops provided.
- No PDF/UA tags — honest, not aspirational.
- No vector SVG embed — matplotlib emitted raster PNG.
- No reproduction re-run within this artifact.
- PROVEN count on skills: 0 — EXECUTABLE ≠ PROVEN.

16 · Next Actions

- PROVIDE REAL GEOLOGICAL DATA — route well tops / seismic / LAS to GEOX.
- AUTHORIZE GEOX retrieval plumbing decision (base64 vs shared volume).
- CLASSIFY CONTEXT-only maps as shippable (truth_class=CONTEXT) or not.
- NAME THIS ARTIFACT'S SEAL PATH — this is a receipt, not a seal.
