KCP-001 Phase A – Intra-Sovereign Review Packet (DRAFT)

> ****Internal only. Not for publication, not for handover to any third party.****
> This packet exists so that Arif (F13 SOVEREIGN) can decide whether Phase A is fit for promotion to canonical, or whether the four flagged items must be resolved first.
> Reads here are governance-internal. Reviewing material from this packet for external handoff is forbidden until sovereign signs off.

0. Provenance envelope

```

****Summary:**** 8 of 9 deliverables MATCH byte-for-byte. 1 self-row drift (MANIFEST.md). No shortfall; all 9 deliverables verified to exist on disk.

2. IRFAN-EUREKA clause-level conflict matrix

```

| # | IRFAN-EUREKA claim | Canon reference | Conflict | Reason (≤15 words) |
|---|---|---|---|---|
| i | "IRFAN is sealed and operational" (lines 14, 425–427 of the quarantined artifact) |
`ARIF-SALAM-IRFAN-RATIFICATION-2026-09-23.md` lines 49–50, 58, 64 | **hard** | same-day
ratification says IRFAN is emergent output, NOT a sealable entity; no machine seal
established |
| ii | `operating_mode: IRFAN` (line 250, inside $VI "AGENTIC PROMPT – copy-paste ready") |
`ARIF-SALAM-IRFAN-RATIFICATION-2026-09-23.md` lines 49, 58; `agi-asi-skills-
fundamentals.md` Law 1 | **hard** | ratification forbids naming IRFAN as agent or mode;

```

document instantiates it |
iii	"Self-declared seal is constitutional ratification" (lines 17, 425–427)	`auto-seal.md` HUKUM 17; `ARIF-SALAM-IRFAN-RATIFICATION-2026-09-23.md` "machine_seal: NOT_ESTABLISHED"; `apex-reality-kernel.md` invariant 6	****hard****	self-issued constitutional seal without F13 "SAH" or linked receipt violates auto-seal doctrine
iv	"Agentic autonomy can be derived from within the document itself" (lines 240–305 – full agent bootstrap YAML marked "copy-paste ready at start of new agent's system prompt")	`agi-asi-skills-fundamentals.md` Law 6; `apex-reality-kernel.md` invariant 4 (Capability ≠ Authority)	****hard****	embedded system prompt forges new-agent bootstrap from within doc; bypasses F13 capability grant
v	"Identity construction may bypass F13 ratification" (line 12 "compound mode is IRFAN"; line 248; line 250; line 425 `forged\_by: HERMES`)	`apex-reality-kernel.md` invariant 4; `anti-haram-behavior-canonical.md` HARAM 4; `ARIF-SALAM-IRFAN-RATIFICATION-2026-09-23.md` scope-fence	****hard****	agent names itself compound-mode entity without F13 authorization; identity-construction is governance-class mutation

****Conclusion:**** All five IRFAN-EUREKA claims collide with at least one ratified canon. The QUARANTINE registry's `RATIFICATION\_REFUSED` disposition is ****canon-supported****, not arbitrary.

3. Four flagged items requiring sovereign decision

3.1 MANIFEST.md self-row drift (item #5 above)

- ****Defect.**** MANIFEST review-packet table row 6 declares `bytes = 2,421` and mtime `21:33`. Actual file on disk is `5,640` bytes (mtime confirms post-22:00 amendment). Self-SHA absent from front-matter.
- ****Severity.**** Low for promotion to canonical if sovereign chooses to recompute row 6 with current bytes + new SHA
`dbe07b25a868644730c82f24fdafd425cfc0412c6b6bf4116807bcf8b49d41c4`. Medium if the amendment added substantive content that wasn't re-hashed.
- ****Sovereign options.****
 - (a) Embed self-SHA in front-matter; recompute row 6; promote.
 - (b) Hold promotion until row 6 is corrected.
 - (c) Acknowledge the drift on record and promote with the new bytes + new SHA as a corrigendum.

3.2 Census unfiltered scope (privacy boundary acknowledged open)

- ****Defect.**** `CENSUS-KCP001-PHASE-A.md` lines 14, 17–51 self-flags that the Phase A scan did NOT enforce the proposed default_exclusions (`ssh/`, `gnupg/`, `aws/`, `config/`, `cache/`, browser-profile, Telegram, WhatsApp, `\*.env`, `\*credential\*`, `\*token\*`, `\*secret\*`, `\*key\*`, `\*cookie\*`). Sensitive paths may have been indexed/hashed via full file content read for SHA-256 methodology.
- ****Severity.**** High. The privacy exclusions canon was proposed but never enforced in Phase A; the corpus may contain references to secrets, tokens, browser state, and personal communications.
- ****Sovereign options.****
 - (a) Re-census with exclusions enforced before Phase B.
 - (b) Allow Phase B (linter, claim-extractor, inventory) to start but with explicit privacy surface prohibitions built into their tool specs (§A.7 of Phase B proposed spec).
 - (c) Hold KCP-001 entirely; revisit privacy exclusions first.

3.3 All MANIFEST front-matter prefixes are 8-char SHA truncations, not full hashes

- ****Defect.**** Every front-matter SHA in Phase A deliverables shows an 8-character prefix only. The MANIFEST itself instructs: ****"recompute before relying."*** Recomputation confirmed all prefixes; no mismatch. But the publication convention is unsafe – silent truncation

collisions are theoretically possible across the 17,816-file corpus.

- **Severity.** Low for the verifier itself. Medium for any downstream consumer that doesn't recompute.

- **Sovereign options.**

- (a) Embed full SHA-256 in all front-matter going forward; keep prefixes for backward compatibility.
- (b) Keep current convention; require explicit recompute instruction in front-matter.
- (c) Adopt a different naming scheme (multi-hash, content-addressed file paths).

3.4 No `--amend` receipts found

- **Defect.** Beyond the `amended: 2026-09-24T22:00:00+08:00` line in MANIFEST.md front-matter, no formal amendment receipts exist for the Phase A deliverables. The amendment_reason strings name F13 directives but no linked receipt IDs.

- **Severity.** Low. Phase A was a `DRAFT\_RECEIPT` not a seal, so receipt-linkage is a future-canon-practice question, not an integrity defect.

- **Sovereign options.**

- (a) Adopt canonical amendment-receipt practice for all future KCP phases.
- (b) Defer until KCP-001 Phase B schemas are ratified.
- (c) Document the absence on record without retroactive fix.

4. Sovereign decisions pending (6, per sequence)

#	Decision	Pre-condition	Recommendation
1	Accept/reject Phase A census scope and methodology	–	ACCEPT with corrigendum: the four flagged items do not invalidate Phase A; they bound it. Promote to `DRAFT_RECEIPT_FOR_REVIEW` status, not canonical.
2	Approve KCP-001 zone model	After #1	HOLD until privacy-exclusion policy (§3.2 item) is settled. Zone model should not entrench an unfiltered scope.
3	Approve artifact and claim schemas	After #2	HOLD until zone model is approved.
4	Ratify IRFAN-EUREKA handling classification	After #3	RATIFICATION_REFUSED + QUARANTINED_REGISTRY_ONLY confirmed canon-supported (§2 above). No further work required; preserve current disposition.
5	Approve Phase B tool specifications and write scopes	After #4	HOLD. Privacy-exclusion enforcement and hash semantics must be wired into every Phase B tool spec before any promotion.
6	Review each distillation's promotion path	After #5	HOLD; six order preserved.

Six F13 decisions remain sequenced, not fused.

5. Internal-use envelope (binding)

This packet is intra-sovereign review material. Until sovereign signs off:

- **permitted_use:** private reflection · governance review · schema-design input.
- **prohibited_use:** allegation support · motive attribution · publication · journalist handoff · third-party disclosure · re-canonising IRFAN-EUREKA · any artifact stamped "READY FOR PUBLICATION" or equivalent.

Once sovereign signs off and the four flagged items are resolved, a v2 of this packet can be promoted. Until then, this packet travels as draft.

`DITEMPA BUKAN DIBERI ` – sealed as internal review packet, not as proof.

DITEMPA BUKAN DIBERI  — sealed as internal review packet, not as proof.
