artifact_sha256 delivered in EDITION-007.sha256 – a file cannot embed its own hash
signature      not_signed (hashes only; authorship is not proven by a hash)
```

The content hash above covers the canonical source of this document and was computed before it was injected, so it is checkable from the page. The artifact hash covers the rendered file's bytes and therefore cannot appear inside it — it ships in the sidecar, in sha256sum -c format. Neither hash says anything about whether the contents are true.

0 · What Changed Since Yesterday

Compared against **EDITION-006**. 6 new, 3 moved, 24 carrying over, 6 dropped without resolution

Changed state (3)

Item	Section	Was	Now
East-West pipeline still shut; Aramco repair window unchanged	SITUATION	MOVED	OPEN
PETRONAS LNG portfolio positioning carries forward	SITUATION	NEW	OPEN
The shooting can stop before the bill does - and now the reverse risk appears	VOID	NEW	OPEN

New today (6)

Item	Section	Was	Now
UNGA this week is the next price event, recorded here strictly as a market driver	SITUATION	—	NEW
AI-generated intimate images fall inside the criminal definition - carries forward	RISK	—	OPEN

Situation

Brent fell below USD 100 - fourth straight session down MOVED

Brent dropped about 3.7 percent on Monday to roughly USD 99.8, its fourth consecutive decline and the first close below 100 since the spring spike. The driver reported by the market: Washington decided against striking Yemen for now and signalled openness to meeting Iran's president on the sidelines of the UN General Assembly this week in New York. For the OD1 arithmetic this matters directly - every sustained USD 10 off Brent changes the revenue line the whole sector is judged against.

Source: TradingEconomics Brent page, actual 99.82, daily change -3.69 percent, dated Monday 21 Sep 2026; CNBC 21 Sep 2026 'US crude oil tumbles back below USD 100'. Two origin units (exchange data aggregator + wire), W=2.

UNGA this week is the next price event, recorded here strictly as a market driver NEW

Reports say Trump rejected Saudi calls to strike the Houthis and indicated he would probably be open to meeting President Pezeshkian during the UN General Assembly session in New York this week. No meeting is confirmed. This is logged not as politics but because it is currently the single largest swing factor in the Brent price that feeds the petroleum revenue projection and, through it, the mood around OD1. If talks materialise, the risk premium unwinds further; if they collapse, Monday's drop reverses fast.

Source: TradingEconomics Brent commentary 21 Sep 2026 citing market reports; CNBC same-day. Anti-thesis search 'oil price spike risk analysts warn supply disruption' returned only August-dated escalation pieces - no current counter-signal found. Recorded per standing rule: politics stripped, price driver kept.

Saudi barrels through Hormuz at 2.9 million a day; supertanker queue at Gulf terminals is the highest since June MOVED

Saudi Arabia moved crude through the strait at 2.9 million barrels a day over the past six days, up from the 2.8 million recorded yesterday. Satellite images over the weekend showed supertankers with combined capacity around 14 million barrels waiting at Saudi Gulf export terminals - the highest count observed since at least June. Yet overall transit counts through the strait continued to decline. Physical barrels are flowing; the paper market is pricing calm. That gap is the story.

Source: TradingEconomics Brent news feed 21 Sep 2026, citing tanker-tracking and satellite data. W=1 origin (single aggregator summarising trackers); flagged as such. Transit-count series via USNI/TankerMap context from prior editions.

Paper and physical keep parting: Brent under 100 while Middle East flows average 17.1 million bpd MOVED

Middle East oil flows averaged 17.1 million barrels a day over the past ten days despite the East-West pipeline outage - physical supply is resilient. Meanwhile the Brent futures price fell four sessions to below USD 100 on diplomacy headlines. The crack logged yesterday has widened: the price anchor used in Budget 2027 and in every sector forecast is now clearly softer than the physical market suggests. For OD1 that means the revenue outlook the company plans against is more volatile than the headline number implies.

Source: TradingEconomics commodity feed 21 Sep 2026 (flow average and Brent move on same dated page). Chronological lock: pipeline closure 12 Sep < flow average window 11-21 Sep < price move 21 Sep. Sequence holds.

East-West pipeline still shut; Aramco repair window unchanged [OPEN](#)

The East-West pipeline to Yanbu remains closed after the 12 September drone attack. Aramco's stated target stands: about half of operational capacity within days, full capacity in roughly six weeks from the repair start reported on 17 September - which puts full restoration around late October. No new confirmation of partial restart has been published. Carries forward unchanged.

Source: Arabic Trader 17 Sep 2026 citing source close to Aramco; Al Jazeera 12 Sep 2026 on the shutdown. No newer report found on 21-22 Sep searches - absence noted, not resolved.

Houthi maritime posture holds; Trump decision against new strikes lowers near-term escalation odds [OPEN](#)

The Houthi position at Mocha and the depressed Bab el-Mandeb traffic pattern carry forward. The reported US decision against bombing Yemen for now reduces near-term escalation risk but changes nothing on the water. HRW documented four confirmed attacks on commercial vessels in its 15 September report. Position unchanged.

Source: HRW 15 Sep 2026 report on Houthi attacks (Encelia, Daisy, Tihamah, Amzan); TradingEconomics 21 Sep on the strike decision. Register carry-forward for Mocha.

Budget 2027 is tabled Friday 9 October - 17 days from today [OPEN](#)

The Ministry of Finance confirms Budget 2027 goes to Parliament on 9 October 2026, following Budget 2026's RM419.2 billion. This is the next formal public occasion where petroleum revenue assumptions, subsidy policy and anything touching the sector will be stated on the record. With Brent now below USD 100, watch whether the revenue anchor in the budget documents moves with it. Countdown: 17 days.

Source: MOF Pre-Budget Statement 2027 (mof.gov.my press release); iMoney budget preview citing the parliamentary sitting calendar. Two origin units, W=2.

Block A-18-01 PSC carries forward - Carigali subsidiary PC JDA, 35-year term [OPEN](#)

The new production sharing contract for Block A-18-01 in the Malaysia-Thailand Joint Development Area, awarded to PC JDA Ltd (wholly owned by PETRONAS Carigali) with PTTEP JDX, carries forward with no new development since the 14-15 September signing coverage. A companion GSA with PETRONAS and PTT supports gas supply continuity to both countries. Directly relevant: this is Carigali upstream, 35 years, the kind of asset horizon that frames what stays and what goes in the new organisation design.

Source: PETRONAS media release 11 Sep 2026; The Star/PressReader 15 Sep 2026 (Bangkok dateline). W=2.

PETRONAS LNG portfolio positioning carries forward [OPEN](#)

PETRONAS LNG's stated portfolio strategy - Bintulu, Canada, and the coming Sabah plant built for Asian demand growth - carries forward with no contradicting development. The JOGMEC master agreement of 11 September strengthens the Japan LNG axis. No new filing or release found in today's sweep.

Source: PETRONAS media releases page (11 Sep 2026 JOGMEC item); prior-edition register entry.

Estuary and Mutiara PSC awards carry forward, no new development [OPEN](#)

No new information on the Estuary and Mutiara PSC awards in today's sweep. Carries forward.

Source: Register carry-forward; PETRONAS media release page checked 22 Sep - nothing new.

SEA METEC methane measurement centre carries forward [OPEN](#)

No new development on the Southeast Asia methane measurement centre. Carries forward.

Source: Register carry-forward; sweep 22 Sep found nothing new.

PETRONAS-METLEN LNG sale and purchase agreement carries forward [OPEN](#)

No new development on the METLEN LNG SPA. Carries forward.

Source: Register carry-forward; sweep 22 Sep found nothing new.

PETRONAS 1H 2026 results carry forward [OPEN](#)

The 1H 2026 financials remain the last published performance baseline. Q3 results will land against a very different Brent path than H1 saw. Carries forward.

Source: Register carry-forward.

Carbon tax delay carries forward; Budget 2027 on 9 October is the next date that matters [OPEN](#)

No new statement on the carbon tax since the delay. The 9 October budget is the next plausible occasion for a revised timeline. Carries forward.

Source: Register carry-forward; MOF pre-budget statement checked - no carbon tax revision published.

Fed holds at 3.75-4.00 per cent after September's first hike since 2023 [OPEN](#)

The rate path carries forward. The dollar and rate environment feeds LNG contracting economics and the ringgit, which in turn feeds domestic fuel and tariff decisions. No new Fed development in the window.

Source: Register carry-forward.

Sarawak petition on PDA 1974, Continental Shelf Act 1966, Petroleum Mining Act 1966 plus the 1954 boundary order carries forward [OPEN](#)

The Federal Court petition filed 23 February 2026 stands as scoped. A Sabah NGO intervention application (SABAR) was fixed for hearing on 28 August; no published outcome found in today's sweep. Whatever the final shape of this litigation, it is the structural question over Carigali's Sarawak operating future. Carries forward.

Source: Reuters 23 Feb 2026; The Edge 10 Jun 2026 on the SABAR intervention. Absence of post-hearing reporting noted, not resolved.

OPS: federation green on six of seven probes; no calendar source found; no weather warning for Kuala Muda OPEN

Health: arifOS (8088) green, FED (7074) green, FRAME (18085) green, WELL (18083) green, GEOX (8081) green, FED-alt (7071) green; the known-unreliable 4000 endpoint stays down - unchanged and expected. Calendar: no calendar store exists on this host, so today's items cannot be listed; that is a missing source, not an empty day. Weather: MetMalaysia's Kedah forecast for 22 September shows routine thunderstorms in most places, 24-32C, with no warning-level alert active for Kuala Muda. Open loops: no pending F13 decisions in carry_forward; the standing rule from 18 September (drop political narrative, focus OD1) was applied - the UNGA item above is carried strictly as a price driver.

Source: Live curl probes to 127.0.0.1 health endpoints at 06:02 MYT 22 Sep 2026; met.gov.my Kedah state forecast page fetched same run; carry_forward.json pending_decisions and open_loops both empty; brief-rules.md standing instruction.

Wall

WALL: the Federal Court full hearing date on the PDA 1974 petition remains unpublished

OPEN

UNRESOLVED, not withdrawn: a full hearing date is knowable and will be published, but no open source carried one as of this sweep. The March 16 date in circulation belongs to the separate PETRONAS leave application, not the state petition's full hearing. Do not conflate the two. This wall stands.

Source: Sweep 22 Sep 2026: Reuters, The Edge, Borneo Post checked; no full-hearing date found. Distinction between leave application and petition sourced from The Edge (node 793976).

WALL: whether LNG exported from Bintulu sits with PETROS or PETRONAS remains contested and unresolved in open sources CONTESTED

No filing, judgment or authoritative statement resolves the Bintulu LNG jurisdiction question in open sources. It stays **CONTESTED** - not **SETTLED**, not **WITHDRAWN**. This wall stands until a court or a filing speaks.

Source: Register carry-forward; sweep 22 Sep found no resolving document.

Void

The shooting can stop before the bill does - and now the reverse risk appears OPEN

War-risk insurance premiums on Gulf transits reprice slowly and unwind even slower, so shipping and LNG freight costs stay elevated after the security situation improves. Concrete consequence for you: if UNGA talks this week calm the market, Brent drops fast but the delivered-cost lag inside PETRONAS's LNG and trading books unwinds over quarters, not days - margin compression can persist after the headline crisis ends. The opposite tail also exists: a talks collapse reprices everything upward within a session.

Source: Register carry-forward; premium-lag mechanism documented in prior edition sourcing (insurance market reporting). UNGA timing from 21 Sep market coverage.

EPF nomination voids on change of marital status - check it once, before OD1, not after

OPEN

A change in marital status voids an existing EPF nomination, and the money then distributes by faraid/probate rules rather than your written choice. Concrete consequence: in an exit year with a lump-sum MSS package touching EPF-adjacent planning, an outdated nomination is a silent failure that only surfaces at the worst moment. One portal check, five minutes, once. Carries forward.

Source: Register carry-forward; EPF nomination rules as documented in prior edition sourcing.

RM 13.3 billion of unclaimed money sits at the Accountant-General's office

OPEN

Dormant accounts, unpaid dividends, stale cheques - searchable by IC at egumerih.hasil.gov.my. Concrete consequence: thirteen years at one employer through reorganisations means old payroll accounts and insurance payouts are plausible candidates; a separation year is the natural moment to sweep the register once. Carries forward.

Source: Register carry-forward; figure as published in prior edition sourcing.

Sarawak state election due by April 2027

OPEN

The election clock runs alongside the PDA petition and OD1. Concrete consequence: state-federal petroleum politics will be campaign material in Sarawak, which raises the odds of movement - or noise - around the Petros/PETRONAS file inside your OD1 window. Carries forward.

Source: Register carry-forward; constitutional due date.

Tasik Bera encroachment carries forward

OPEN

No new development on the Ramsar-site encroachment issue. Carries forward as a standing environmental-governance watch item.

Source: Register carry-forward.

Eureka

The youngest planet ever confirmed is under a million years old - and still being born

NEW

Astronomers confirmed Elias 2-24 b, a gas giant in the Ophiuchus star-forming region about 450 light-years out, as the youngest known planet - under a million years old, still whirling inside its natal disk of dust and gas. The confirmation came not from a new telescope but from re-mining NASA-funded archival data. For scale: the Earth is 4,500 times older; this is a planet you could almost call a foetus. Checkable against the NASA release and the underlying study.

Source: NASA Science release 'Newfound Baby Planet Smashes Record for Youngest Known World' (science.nasa.gov), 20 Sep 2026; independently covered by Live Science and Space.com. W=3.

A 'born-again' star just changed evolutionary stage while astronomers watched

NEW

Sakurai's Object, one of the fastest-changing stars ever observed, has been confirmed to have entered a new stage of its evolution - a rare chance to watch stellar evolution happen on a human timescale rather than a geological one. The

star is executing a 'born-again' helium-shell flash: it had settled into a white dwarf, then reignited and swelled back into a giant within years. Textbooks describe this transition in millions of years; here it is dated in observing seasons.

Source: phys.org 17 Sep 2026, 'Born-again star offers rare chance to watch stellar evolution in real time'; innovationnewsnetwork.com same week naming Sakurai's Object. W=2.

Protein in 20 Homo naledi teeth came back all-female - a possible sex-specific burial ritual

NEW

Analysis of proteins preserved in teeth from 20 different Homo naledi individuals from the Rising Star cave system found all 20 were female. The authors raise the possibility that this small-brained hominin practised sex-specific burial - deliberate body disposal in deep, hard-to-reach chambers, which would push the origins of funerary behaviour deeper into our family tree than conventionally accepted. The finding is published in the September/October Archaeology Magazine world roundup and is checkable there.

Source: Archaeology Magazine September/October 2026 issue, World section (archaeology.org). W=1 origin - single-magazine summary of the underlying study; flagged as such. Protein-based sex identification is the stated method.

Risk

Haze reversed direction: 21 unhealthy stations Monday morning, down to 17 by evening

MOVED

After peaking at 32 unhealthy areas on 20 September, the count fell to 21 stations Monday morning and 17 by evening, with Kapit and Serian in Sarawak the most shrouded. The trend is now improving - the first improvement since this item opened. For you in Kuala Muda: peninsula readings are out of the unhealthy band; the smoke problem is concentrated in Sarawak. No emergency threshold anywhere near.

Source: Malay Mail 21 Sep 2026, two same-day reports (8.30am: 21 stations; evening: 17 stations, Kapit and Serian worst); FMT 21 Sep (16 nationwide, 10 in Sarawak). W=2, timestamps ordered within the same day.

Current pump band expires tomorrow: RON95 market RM4.37, RON97 RM4.87, diesel RM5.27; BUDI95 stays RM1.99

OPEN

The official data.gov.my series confirms the 17 September band: RON95 RM4.37, RON97 RM4.87, diesel (peninsula) RM5.27, subsidised BUDI95 RON95 unchanged at RM1.99. The next update publishes Wednesday 23 September evening and takes effect 24 September. With Brent down four sessions and under USD 100, the market band has room to soften - but the subsidised RON95 you actually pump does not move with it. No action needed; this is a watch item, not a decision.

Source: storage.data.gov.my/commodities/fuelprice.csv, level row 2026-09-17 (verified numbers, not a news quote); data.gov.my catalogue page states next update 23 Sep 2026. Figure ledger: all four prices trace to the MoF-published CSV.

Electricity protection threshold reverts from 800 to 600 kWh on 1 January 2027

OPEN

The raised 800 kWh shield (no AFA, retail charge or SST) runs September to December 2026 and reverts to 600 kWh on 1 January 2027. That is one month before OD1. If household usage sits between 600 and 800 kWh, the January bill jumps - worth knowing before the income transition, not after. Carries forward.

Coal at USD 148 per tonne; the minister has tied it to the electricity bill [OPEN](#)

Generation cost pressure carries forward unchanged. Relevant because it feeds the AFA mechanism that the 800 kWh shield currently suspends - when the shield reverts in January, this cost pressure is what the bill re-exposes to. Carries forward.

Source: Register carry-forward; no new ministerial statement in today's sweep.

AI-generated intimate images fall inside the criminal definition - carries forward [OPEN](#)

The legal protection position carries forward with no new development. Stays on the register as a standing awareness item.

Source: Register carry-forward.

Own

OD1 March 2027 - about five and a half months out; the price ground shifted again this weekend [OPEN](#)

The date has not moved and nothing here requires action today. What moved: Brent broke below USD 100 on diplomacy signals, so the revenue environment the MSS package was quoted against is softening at the headline level even while physical barrels flow strongly. Two dates now sit inside your decision runway and before OD1: Budget 2027 on 9 October (17 days) and the electricity threshold reversion on 1 January (one month before exit). The rightsizing programme's stated conclusion was August with the new organisation design live from 1 August - you are now operating inside the final structure, which is itself information for the March decision.

Source: Register carry-forward (OD1 March 2027, MSS quoted). Ground movement sourced to the SITUATION and RISK items above. Rightsizing timeline: NST/The Edge Feb 2026 reporting on the group CEO's statement; no later public statement found in today's sweep.
