artifact_sha256 delivered in EDITION-009.sha256 – a file cannot embed its own hash
signature       not_signed (hashes only; authorship is not proven by a hash)
```

The content hash above covers the canonical source of this document and was computed before it was injected, so it is checkable from the page. The artifact hash covers the rendered file's bytes and therefore cannot appear inside it — it ships in the sidecar, in sha256sum -c format. Neither hash says anything about whether the contents are true.

0 · What Changed Since Yesterday

Compared against **EDITION-008**. 3 new, 5 moved, 3 settled, 26 carrying over

Changed state (5)

Item	Section	Was	Now
US-Iran channel: still no meeting; the post-midterms framing stands	SITUATION	MOVED	OPEN
Limbayong iEPCI award to FMC: no development beyond the 22 September release	SITUATION	NEW	OPEN
Budget 2027 is 15 days out - GST return ruled out, the oil assumption is the live variable	SITUATION	OPEN	MOVED
CORRECTION: the Fed raised rates to 3.75-4.00 percent on 16 September - the register had this as stalled	SITUATION	OPEN	MOVED
The physical unwind still starts before the cost unwind - watch the freight and premium legs	VOID	MOVED	OPEN

Carrying over unchanged: **26** item(s). Not repeated in full — see the open-items register.

0.1 · Standing Instructions

Derived from your own comments on earlier editions. Each shows the words it came from. A rule you no longer want can be retired; it is listed here so it cannot operate invisibly.

Instruction	Standing since	Editions
Buang naratif politik. Fokus pada OD1. heard as: “Buang naratif politik. Fokus pada OD1.”	2026-09-18	17

Situation

Brent pushed back above USD 101 on Wednesday - a second straight gain MOVED

Brent settled around USD 101.6 on Wednesday 23 September, up about 2.4 percent on the day and the second consecutive rise, with the month-to-date gain near 10 percent. Two things held it there: the strait is still effectively shut, and the US-Iran channel produced no confirmed progress. One new detail matters more than the price print - Iran's port authority has blacklisted 77 vessels for using the

southern corridor without paying tolls, most of them tankers, and the blacklist does not appear to be deterring traffic. The closure is now producing revenue for Tehran rather than being a chip it wants to spend. For OD1: the price that will decide the 2027 revenue line is being set by an arrangement that has started to pay for itself.

Source: TradingEconomics Brent series, 23 Sep 2026 (101.61, +2.37 pct day, +10.24 pct month). Windward Daily Intelligence (77-vessel toll blacklist; tankers 85 pct of the list; 40 pct Emirati-owned or chartered). W=2 origins for the price path; the blacklist is W=1 and flagged as such. Anti-thesis search for a materially softer 2027 view was run and is recorded in the 2027 price-band item below - it did not falsify the near-term reading, it bounded it.

Hormuz shut on day 207; the seven-day offer still has no taker and no confirmation

CONTESTED

The latest recorded transit count is a single vessel on 20 September against roughly 85 on a normal day, so the strait remains effectively closed to commercial shipping. Iran's 22 September offer to reopen within seven days remains conditional on Washington easing military pressure and lifting the blockade of Iranian ports, and it still sits beside Tehran's standing position that reopening is ruled out until six demands are met. No Omani confirmation and no US response. Treat it as a negotiating position, not a schedule.

Source: straits.live daily brief 23 Sep 2026 (day 206-207; IMF PortWatch one transit on 20 Sep against pre-crisis baseline). Prior register entry for the 22 Sep seven-day offer (Reuters, 22 Sep). Two Iranian positions, no counterparty confirmation - **CONTESTED** stands. W=2.

US-Iran channel: still no meeting; the post-midterms framing stands

OPEN

No confirmed US-Iran meeting this week, and no change to the position recorded on 22 September - a deal is pointed at after the US midterms. It stays in the brief because it is still the dominant price driver, not because anything is new. Unchanged.

Source: Register carry-forward; sweep 24 Sep 2026 found nothing newer than the 22 Sep statements. Chronological lock: statement 22 Sep < US midterms Nov 2026.

Supertanker queue at Saudi Gulf terminals carries forward

OPEN

No newer transit or queue count was published in this sweep. The mechanism is unchanged: the restarted Yanbu line is the drain that draws the Gulf queue down first. Carries forward.

Source: Register carry-forward; last reading 21 Sep 2026 (14 million barrels of waiting capacity). W=1, flagged.

Houthi maritime posture holds; no new strike decision reported

OPEN

The Mocha position and the depressed Bab el-Mandeb traffic pattern carry forward with no new development in this sweep. HRW's 15 September documentation of four confirmed attacks on commercial vessels remains the last verified count.

Source: Register carry-forward; sweep 24 Sep found nothing newer. HRW 15 Sep 2026.

Limbayong iEPCI award to FMC: no development beyond the 22 September release

OPEN

The integrated EPCI award for Carigali's Limbayong deepwater development carries forward with no new information. The point it made still stands: the portfolio the post-rightsizing organisation inherits includes multi-year deepwater commitments that run past the OD1 date.

The 2027 oil price the budget is built on is now under upward review MOVED

Reported on 22 September: the government's existing oil forecasts assume Brent averaging USD 80 a barrel in 2026 and USD 74 in 2027, and those assumptions are under review for upward revision to roughly USD 90 and USD 80. That is the line that decides petroleum revenue in Budget 2027, tabled on 9 October. Against it stands the outside view: the EIA expects Brent to average USD 74 in 2027 as inventories rebuild, Wood Mackenzie models USD 78 on reopening, and JPMorgan points at the low USD 60s from the second half of 2027. So the official assumption is being revised up at exactly the moment the mine-run forecasters see the price coming down. For OD1 that gap - not the daily price - is the thing to watch: a budget built on USD 80 to 90 revenue is a different employer balance sheet from one built on USD 74.

Source: BusinessToday.my 22 Sep 2026 (base assumptions USD 80 / USD 74, under review toward about USD 90 / USD 80); EIA Short-Term Energy Outlook (Brent averaging USD 74 in 2027); Wood Mackenzie via AOGR (USD 78 in 2027 on reopening); J.P. Morgan Global Research (low USD 60s from H2 2027). Four origins, each labelled; the official review figure is a single reported source and is marked as reported. Chronological lock: published assumptions before 22 Sep < review reported 22 Sep < budget tabling 9 Oct 2026.

Budget 2027 is 15 days out - GST return ruled out, the oil assumption is the live variable

MOVED

Budget 2027 goes to Parliament on Friday 9 October, 15 days from today. The preview points to no GST return and no major new tax measures, which leaves the petroleum revenue assumption and subsidy policy as the two lines that move this sector. Watch whether the oil price assumption is formally raised from its published base, and whether the fuel subsidy framework is restated.

Source: MOF Pre-Budget Statement 2027 (mof.gov.my); BusinessToday.my 22 Sep 2026 preview; parliamentary calendar. W=2. Countdown computed from 24 Sep 2026.

Carbon tax delay carries forward; Budget 2027 is the next date that matters OPEN

No new statement on the carbon tax since the delay, and the 22 September budget preview does not point to new tax measures. The 9 October budget remains the next plausible occasion for a revised timeline. Carries forward.

Source: Register carry-forward; MOF pre-budget statement and 22 Sep preview checked - no carbon tax revision published.

Sarawak petition on PDA 1974 and the petroleum statutes carries forward OPEN

The Federal Court petition on the Petroleum Development Act 1974, Continental Shelf Act 1966, Petroleum Mining Act 1966 and the 1954 boundary order stands as scoped. No published outcome from the SABAR intervention application. PETRONAS's own media releases page was checked this run - nothing on the litigation, newest releases are 14-15 September. Carries forward; the WALL item below records what is missing.

Source: Reuters 23 Feb 2026; The Edge 10 Jun 2026 (SABAR intervention); petronas.com media releases checked 24 Sep 2026. Absence of post-hearing reporting noted, not resolved.

Block A-18-01 PSC carries forward - Carigali subsidiary PC JDA, 35-year term [OPEN](#)

The new production sharing contract for Block A-18-01 in the Malaysia-Thailand Joint Development Area, awarded to PC JDA Ltd with PTTEP JDX, carries forward with no development since the 14-15 September signing coverage. A companion gas sale agreement with PETRONAS and PTT supports supply continuity to both countries. Carigali upstream, 35 years.

Source: PETRONAS media release 14 Sep 2026; The Star 15 Sep 2026. W=2. PETRONAS media page checked 24 Sep - nothing newer.

PETRONAS LNG portfolio positioning carries forward [OPEN](#)

The stated portfolio strategy - Bintulu, Canada and the coming Sabah plant built for Asian demand growth - carries forward with no contradicting development. No new release found in today's sweep.

Source: petronas.com media releases page checked 24 Sep 2026 (newest items 14-15 Sep); prior register entry.

Estuary and Mutiara PSC awards carry forward, no new development [OPEN](#)

No new information on the Estuary and Mutiara PSC awards in this sweep. Carries forward.

Source: Register carry-forward; PETRONAS media page checked 24 Sep - nothing new.

SEA METEC methane centre: collaboration item re-surfaced, substance unchanged [OPEN](#)

The Southeast Asia methane measurement centre carries forward. PETRONAS's 15 September release covered a partner-collaboration arrangement for the centre; no new technical or commercial term was published. Carries forward.

Source: petronas.com media release 15 Sep 2026 (SEA METEC collaboration); media page checked 24 Sep 2026. W=1 origin, flagged.

PETRONAS-METLEN LNG supply agreement carries forward [OPEN](#)

No new development on the METLEN LNG supply agreement since the 14 September release. It remains a Southeast Asia diversification contract in the portfolio. Carries forward.

Source: petronas.com media release 14 Sep 2026; media page checked 24 Sep - nothing newer.

PETRONAS 1H 2026 results remain the last published baseline [OPEN](#)

The 1H 2026 financials are still the last published performance baseline. Q3 will land against a very different Brent path than H1 saw. Carries forward.

Source: Register carry-forward.

CORRECTION: the Fed raised rates to 3.75-4.00 percent on 16 September - the register had this as stalled [MOVED](#)

The FOMC raised the target range by 25 basis points to 3.75 to 4.00 percent on 16 September, on a 12-0 vote, effective 17 September, and the September projections put the funds rate in the low 4 percent range in 2027. The register recorded no new development in the window; that was wrong - the decision landed on the 16th, before the last two sweeps. The correction is recorded here

rather than smoothed over. What it means for OD1 is unchanged in kind and larger in size: a higher-for-longer US path feeds the ringgit, imported cost and LNG contracting economics, and firms the USD leg of every dollar-denominated figure in the budget and MSS stack.

Source: federalreserve.gov press release 16 Sep 2026 (raise, 12-0) and implementation note effective 17 Sep (target range 3-3/4 to 4 percent); FOMC projections 16 Sep 2026; Chair Warsh press conference transcript 16 Sep 2026. One origin - the Federal Reserve itself - across three primary documents, so W=1 with high warrant. Correction recorded by appending, not by editing the earlier entry.

OPS: five of six organs green; the D1-D4 batch was already ratified on 20 September

MOVED

Health at 06:00 MYT: arifOS (8088) green - yesterday's deployment-attestation drift has cleared, runtime now matches build, vault healthy, 13 floors active. FED (7074) green. FRAME (18085) green. A-FORGE sense (7071) green, no drift. GEOX (8081) healthy with its kernel verdict HOLD by design. WELL (18083) degraded - deployed commit differs from source commit, and its human-state snapshot is 54 hours old and self-reported rather than sensor data. Calendar: there is still no calendar store on this host, so today's items cannot be listed - a missing source, not an empty day. Weather Kuala Muda: 24C at 06:00 with light rain, showers through the week, no warning-level alert. Correction to yesterday: the F13 batch on D1 to D4 was recorded as resolved in the 20 September ratification note, so yesterday's line that it awaited your word was stale. Still genuinely open and yours: the F6 observability coupling rule, and the ghost postgres retirement on 5432. Standing rule applied: political narrative stripped, focus kept on OD1.

Source: Live curls 06:00-06:05 MYT 24 Sep 2026 (8088, 7074, 18085, 18083, 8081, 7071); open-meteo Kuala Muda 24 Sep 2026; carry_forward.json closure notes read against entries e-da75fb17 and e-6207c00b, which still carry no closure note. Standing instruction read from brief-rules.md.

Wall

WALL: the Federal Court full hearing date on the PDA 1974 petition remains unpublished

OPEN

UNRESOLVED, not withdrawn: a full hearing date is knowable and will be published, but no open source carried one in this sweep. The 16 March date in circulation belongs to the separate PETRONAS leave application, not to the state petition's full hearing. Do not conflate the two. This wall stands.

Source: Sweep 24 Sep 2026: Reuters, The Edge, Malay Mail, Borneo Post checked; no full-hearing date found. Leave-application versus petition distinction sourced from The Edge (node 793976).

WALL: whether LNG exported from Bintulu sits with PETROS or PETRONAS remains contested

CONTESTED

No filing, judgment or authoritative statement resolves the Bintulu LNG jurisdiction question in open sources. It stays **CONTESTED** - not settled, not withdrawn. This wall stands until a court or a filing speaks.

Source: Register carry-forward; sweep 24 Sep 2026 found no resolving document.

Void

The physical unwind still starts before the cost unwind - watch the freight and premium legs [OPEN](#)

No new trigger this sweep, but the mechanism is worth keeping visible: war-risk premiums and LNG freight reprice on exposure windows, so they unwind over weeks to quarters after a trigger event, not in the same session. Concrete consequence: if reopening talk firms, expect Brent to fall before PETRONAS's delivered-cost base does - a margin squeeze that shows up in the trading and LNG books after the crisis has left the front page. And the reverse holds: with the closure now paying Tehran tolls, the trigger may be slower to arrive than the headline cycle suggests.

Source: Mechanism documented in prior editions' insurance-market sourcing; today's supporting facts are the toll blacklist (Windward, 23 Sep) and the still-shut strait (straits.live, 23 Sep). W=2.

EPF nomination voids on change of marital status - check it once, before OD1, not after [OPEN](#)

A change in marital status voids an existing EPF nomination, and the money then distributes by faraid and probate rules rather than your written choice. Concrete consequence: in an exit year with a lump sum touching EPF-adjacent planning, an outdated nomination is a silent failure that only surfaces at the worst moment. One portal check, five minutes. Carries forward.

Source: Register carry-forward; EPF nomination rules as documented in prior edition sourcing.

RM 13.3 billion of unclaimed money sits at the Accountant-General's office [OPEN](#)

Dormant accounts, unpaid dividends, stale cheques - searchable by IC at egumerih.hasil.gov.my. Concrete consequence: thirteen years at one employer through reorganisations means old payroll accounts and insurance payouts are plausible candidates, and a separation year is the natural moment to sweep the register once. Carries forward.

Source: Register carry-forward; figure as published in prior edition sourcing.

Sarawak state election due by April 2027 [OPEN](#)

The election clock runs alongside the PDA petition and the OD1 date. Concrete consequence: state-federal petroleum politics will be campaign material in Sarawak, which raises the odds of movement - or noise - around the Petros file inside your OD1 window. Carries forward.

Source: Register carry-forward; constitutional due date.

Tasik Bera encroachment carries forward [OPEN](#)

No new development on the Ramsar-site encroachment issue. Carries forward as a standing environmental-governance watch item.

Source: Register carry-forward.

The first stellar stream found outside our galaxy - pulled out of old Hubble data NEW

Astronomers identified the first globular-cluster stellar stream beyond the Milky Way: a faint ribbon of stars trailing from an ancient cluster around the ultra-diffuse galaxy UGC 9050-Dw1, about 115 million light-years away. Stellar streams trace a galaxy's gravity, so this one gave the team a way to weigh dark matter in a galaxy far outside our own. The find came out of the Hubble archive - the data already existed.

Source: Nature 2026 (s41586-026-10878-w); ScienceDaily 21-23 Sep 2026; EurekAlert release. W=2 (paper plus release). Checkable against the Nature paper.

Webb found water surviving beside the Milky Way's black hole NEW

Using JWST, astronomers detected oxygen-rich dust and water in the extreme environment around Sagittarius A*, the supermassive black hole at the centre of our galaxy - the first water detection there. Molecular material is surviving radiation intense enough to be expected to destroy it, which means stars close to the black hole can keep feeding material back into their surroundings.

Source: ESA/Webb release weic2617; Space.com 23 Sep 2026; Earth.com 13 Sep 2026. W=2 (ESA primary plus broadcaster).

Titanosaurs nested far south of the equator, eggshells show NEW

Fossil eggshells place titanosaur nesting grounds far south of the equator, widening the known breeding range of the long-necked giants. Nesting sites are how you reconstruct where these animals actually lived and moved, rather than where their bones happened to fossilise.

Source: Sci.News 22 Sep 2026 (Paleontology), reporting the eggshell study. W=1 flagged; checkable against the underlying paper.

Fire amoeba (145F) - published and closed SETTLED

Printed in edition 008 on 23 September. A one-shot curiosity: recorded, delivered, closed, no further tracking.

Source: EDITION-008, 2026-09-23.

Quebec impact crater found by an amateur - published and closed SETTLED

Printed in edition 008 on 23 September. Recorded, delivered, closed, no further tracking.

Source: EDITION-008, 2026-09-23.

Early proto-supercluster - published and closed SETTLED

Printed in edition 008 on 23 September. Recorded, delivered, closed, no further tracking.

Source: EDITION-008, 2026-09-23.

Risk

Haze reverses: Sarawak back to very unhealthy - Kanowit 244, Serian 201 by 6pm MOVED

After two days of improvement, readings turned back up on Wednesday 23 September. Kanowit recorded 244 in the morning and was still very unhealthy at midday; Serian recorded 201 as of 6pm, and around a dozen other Sarawak stations sat in the unhealthy band, including Kuching 175, Sibu 171, Sarikei 169 and Bintulu 169. The peninsula remains outside the unhealthy band and no warning-level alert applies to Kuala Muda. No emergency threshold has been declared anywhere, and the snapshots differ by time of day, so read the readings with their timestamps.

Source: Malay Mail 23 Sep 2026 (Kanowit 244 then 208; Lubok Antu 205 then 195); The Star 23 Sep 6pm (Serian 201, 12 others unhealthy); FMT 23 Sep (Serian 201 at 6pm; Kuching 175, Sibu 171, Sarikei 169, Bintulu 169); Bernama 23 Sep 9am (13 areas unhealthy, highest 180). W=2-3, same-day timestamps ordered. Direction change recorded against the 22 Sep improving entry.

New pump band for 24 September: RON95 market RM4.57, RON97 RM5.05, diesel RM5.42 - your subsidised litre stays RM1.99 MOVED

The 24 September band has published. Market prices rose again: RON95 to RM4.57 (up 20 sen), RON97 to RM5.05 (up 20 sen) and diesel to RM5.42 (up 15 sen), from 4.37, 4.85 and 5.27 last week. The BUDI95 subsidised price stays at RM1.99 and the other subsidised legs are unchanged. So the gap the government is absorbing widened a third week running while the household retail price did not move. That gap is a number that feeds Budget 2027, 15 days out.

Source: storage.data.gov.my/commodities/fuelprice.csv read directly this run: level row 2026-09-24 (4.57, 5.05, 5.42) and change_weekly row 2026-09-24 (+0.20, +0.20, +0.15); BUDI95 column 1.99 in both the 17 Sep and 24 Sep level rows. Figure ledger: every number read from the MoF-published CSV, no news quote used.

Electricity protection threshold reverts from 800 to 600 kWh on 1 January 2027 - 99 days out OPEN

The raised 800 kWh shield - no AFA, retail charge or SST - runs September to December 2026 and reverts to 600 kWh on 1 January 2027, one month before OD1. If household usage sits between 600 and 800 kWh, the January bill jumps. Carries forward.

Source: paultan.org 17 Sep 2026; Life News Agency same week citing the announcement. W=2. Day count computed from 24 Sep 2026.

Coal at USD 148 per tonne; the minister has tied it to the electricity bill OPEN

Generation-cost pressure carries forward unchanged. It matters because it feeds the AFA mechanism the 800 kWh shield currently suspends - when the shield reverts in January, this is what the bill re-exposes to.

Source: Register carry-forward; no new ministerial statement in this sweep.

AI-generated intimate images fall inside the criminal definition - carries forward OPEN

The legal protection position carries forward with no new development. Stays on the register as a standing awareness item.

Source: Register carry-forward.

OD1 March 2027, about five and a half months out - the fiscal ground under it was restated this week MOVED

Nothing on this page requires an action today. What moved: the government's own 2027 oil price assumption is under upward review, from USD 74 toward about USD 80, at the same moment outside forecasters model 2027 at USD 74 or lower - so the fiscal ground under the sector is being restated upward 15 days before the budget is tabled. The Fed correction above restores the true rate baseline for the same arithmetic. One date from your own notes sits closer than any of these: a target of 29 September for the MSS decision and delivery, with proof of receipt - five days out. Treat that as recorded, not as confirmed against HR. Third fixed date inside the runway: the electricity protection threshold reverts on 1 January 2027, one month before exit.

Source: Register carry-forward (OD1 March 2027; MSS package quoted). Fiscal movement sourced to the SITUATION items above. The 29 September target is read from your own message record and is labelled as your note, unverified against HR - it is not asserted as an external deadline.
